

## DS-3084PMG+, DS-3100PMG+, DS-9092PMG+ – Speed-Control Screens

### Advanced Engineering for Controlled Retraction

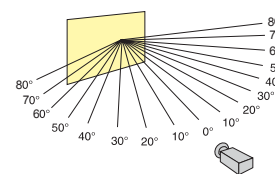

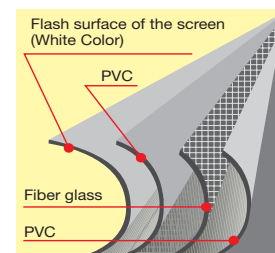

Panoview’s advanced self-locking Speed-Control Screens are a snap to use – just pull down to the desired height, hold for 3 seconds and the screen will stay put. With one pull, the speed-reducing mechanism enables the screen to self-retract into the case quietly and with control much like an electric screen – minus the cord, complicated installation and electrical bill. This technology helps to reduce wear and tear and extend screen life.

The versatile design of these screens allows easy installation to your ceiling or wall. Perfectly suited for various venues such as classrooms, home theaters and meeting rooms, Panoview’s Speed-Control Screens remain secure and safe once installed.

#### Features

- 1.0 gain and 160° viewing angle offer vibrant images and a wider seating configuration
- Speed-reducing mechanism controls retraction to enhance safety and reduce wear and tear on screen
- Self-locking system ensures ease of setup and accurate screen sizing
- Advanced casing design keeps screen wrinkle-free
- High-quality fiberglass and aluminum alloy materials ensure maximum durability
- Versatile design for user-friendly installation in any venue
- Manual pull-down screen
- Washable surface makes for easy maintenance

Viewing angle for Matte White fabric is 160 degrees at 1.0 gain
